Mountain Weather Forecast

Ground Conditions Supplement

Date: Tuesday 13 February 2024 Location: Helvellyn summit at 11:37 Full report: Fresh snow fell overnight and settled above 700m, although a slow thaw set in through daylight hours, and the summit temperature was fluctuating just above freezing point. Snow depth increases with height, and drifts up to 50-60cm in sheltered areas are not uncommon. Small cornices are beginning to develop around corrie rims and pockets of windslab are also present in these locations and along ridge flanks. The summit of Helvellyn is a patchwork of snow and frozen ground. Swirral and Striding Edge are in winter condition, however, with a lot of exposed rock. The feels-like temperature (wind chill) was around -8ºC today and anyone standing still even for short periods would get very cold very quickly. Full winter clothing (warm and waterproof) including hats and gloves, and equipment including a map, compass, and headtorch are all essential. For anyone venturing onto steep and exposed ground (such as the Helvellyn edges), an ice axe, and crampons/microspikes are essential. Temperature: plus 0.2 C, Maximum wind speed 19.2 mph, Wind chill: minus 7.4 C, Average wind speed: 13.7 mph

Issued at: 1430 on Tue 13 Feb 2024
